

Precautions:

- Please tell your physician if there is a possibility you may be pregnant at the time your colposcopy is scheduled. Special precautions can be taken to avoid complications with pregnancy.
- The percentage of reoccurrence for abnormal cell growth is highest in the first two years after treatment. It is often 5 years before a "cure" is declared. You should realize that the evaluation and treatment of abnormalities of tissue within the vagina, such as an abnormal pap smear, often require multiple visits for frequent repeat paps and treatment. A treatment schedule, individualized to your case, will be recommended when the pathology results are reviewed by your physician.
- It is very important that you notify Van Dyke Gynecology if you change your telephone numbers or change addresses so that we may be better able to contact you for results notification and scheduling. Failure to comply with recommended treatment could place you at risk for progressive disease and the possibility of developing cancer.

Please feel free to discuss any remaining questions or concerns you may have regarding colposcopic procedures with your physician before your procedure.

The estimated fees for the various procedures are listed below. There is an additional fee for pathology if tissue samples are taken. The lab pathology fees are based on the type of biopsy taken, as well as the number of tissue samples submitted.

Colposcopy \$ 250.00
 w/ biopsy \$ 350.00

Leep \$ 3000.00

Pathology for biopsies will be billed separately by the lab.
